                                                                                                                                                                          Ω
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 24-control, 24-inoculated, 48-control and 48-inoculated). Poly(A) RNA was purified from total RNA 48-inoculated). Poly(A) RNA was purified from total RNA specimen isolated from individual samples. The poly(A) RNA specimen prepared from 24-control and 48-control samples were mixed at 1:1 ratio. The poly(A) RNA specimen prepared from 24-inoculated and 48-inoculated samples were also mixed at 1:1 ratio. Tomato cDNA library LERSF was then constructed by subtracting the pooled control specimen from the pooled inoculated specimen using CLONTECHPCR-Select cDNA Subtraction kit."

Roots were harvested from plants grown under different developmental stages: 1-,2-,3-,4-month-old. Equal aliquots of mRNA of different developmental stages were mixed and used for cDNA library construction. (Smart PCR cDNA Library construction kit, Clontech)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /clone_lib="Tomato CL5915 roots under different
developmental stages"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /clone lib="Developing fruit flavedo at 80 DAFB"
/clone="Organ: Fruit; Vector: pTriplEx2; Site 1: SfiIA;
/note="Organ: Fruit; Vector: pTriplEx2; Site 1: SfiIA;
/note="Organ: Fruit; Vector: pTriplEx2; Site 1: SfiIA;
Site 2: SfiIB; Developing citrus fruits were harvested
from trees growing in the 'Citrus variety collection' in
the Wolfskill experimental orchard located in Winters,
California (USA). Fruit was collected on July 29, 2003,
between 8 to 9 am and stored at 4C. The flavedo tissue was
dissected out of developing fruit (80 DAFB) and used to
isolate RNA using Trizol reagent from Invitrogen. The cDNA
Library was constructed using the SMART CDNA library Kit
(Clontech). The primary library was en masse evicted and
plasmid DNA containing the cDNA library was isolated from
the resultant bacterial population. Plasmid DNA was then
transformed into ultra competent E coll cells (XL10 Gold;
Stratagene). Transformants were plated out on Q-trays
(2000 cfu/tray), picked using a Qbot and archived in 384
well dishes."

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length librairies construction: Temple G.

Genoscope members carried out sequencing and annotation: Castelli V. Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

URGV INRA: Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.

An Arabidopsis full-length cDNA library was constructed essentially
An Arabidopsis full-length cDNA library was constructed essentially
as reported previously (Seki et al., 1998). This clone is in a
modified pBluescript vector as a SstI/XhoI insert. Please visit our
web site (http://www.gsc.riken.go.jp/e/plant/index _e.html) for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CTAGGCTTAATTTTCCTCATTTGATTGGTTCGAATATTTCCGGACCCGTTAGAGTAAAACC

Modulating level of metabolites and stress resistance in recombinant cells for synthesis of plant metabolites such as alkaloids including terpenoid indole alkaloids, by providing transcription factor to the cell.

Disclosure; Page 97-98; 101pp; English.

Many plant secondary metabolites have value as pharmaceuticals, food colourings, flavours and fragrances. Some plant secondary metabolites are linked to plant or plant cell defence mechanisms and may confer to the plant antimicrobial activity, protection against UV light, herbivores, pathogens, insects and nematodes. Plant secondary metabolites such as terpenoid indole alkaloids (TIA) represent a class of pharmaceutically useful compounds which naturally occur in many plant species. New methods are described which modulate the expression of one or more genes involved

The method comprises inserting into a plant cell a sequence encoding a transcription factor comprising an AP2 DNA-binding domain and by modifying the expression of that transcription factor. Transcription factors comprising an AP2 DNA-binding domain are useful as central regulators of complex metabolite pathways involving numerous target genes for such transcription factors. This means that the yield of commercially valuable metabolite compounds can be enhanced and the tolerance of plants towards exogenous stress factors can be influenced. The method is useful for modulating the level of one or more metabolites. By providing a transcription factor to the cell the level of the metabolite is enhanced by at least 10%, 25% or 100% or reduced 10%, 25%, 50% or 90% relative to a cell to which the transcription factor is not provided
                                                                                                                                                                                                                                                                                                                                             25-FEB-2000;
                                                                                                                                                                                                                                                                                                                                                                                   06-SEP-2000.

                                                                    The invention relates to pathogen-responsive genes that encode a nematode regulated polypeptides. The proteins of the invention include calcium dependent protein kinase (CDPK), nematode-responsive transcription factor 1 (NRTF1), nematode-responsive protein (NRP), caffeic acid 7-0-methyltransferase (70M) or inositol 5-phosphatase (IPP) polypeptides. The nucleic acid molecule encoding the polypeptides are operably linked to a promoter that drives expression in a host cell. The composition and methods are useful for conferring or improving nematode resistance in
                                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic proteins, useful for

                                                                                                                           The invention relates to pathogen-responsive genes that encode a nematode regulated polypeptides. The propoteins of the invention include calcium dependent protein kinase (CDPK), nematode-responsive transcription factor 1 (NRTF1), nematode-responsive protein (NRP), caffeic acid 7-0-methyltransferase (70M) or inositol 5-phosphatase (IPP) polypeptides. The nucleic acid molecule encoding the polypeptides are operably linked to a promoter that drives expression in a host cell. The composition and methods are useful for conferring or improving nematode resistance in plants. The present sequence represents a soybean NRTF1d polypeptide.
                                                                                                                                                                                                                                                                                                    New isolated nucleic proteins, useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   phenotype in desirable ways, such as modifying a plants environmental stress. The transcription factor is encoded by environmental stress tolerance gene derived from Arabidopsis thaliana. The transcription factors and the genes encoding them are used to alter the structure and developmental characteristics of plants such as soybean, wheat, corn, potato, cotton, rice, oilseed rape, sunflower, alfalfa, sugarcane, turf, banana, blackberry, blueberry, strawberry, raspberry, cantaloupe, carrot, cauliflower, coffee, onion, cucumber, eggplant, grapes, honey dew, calleflower, mango, melon, papaya, peas, peppers, pineapple, spinach, squash, sweet corn, tobacco, tomato, watermelon, rosaceous fruits and/or vegetable brassicas. These sequences are also used for modifying traits associated with environmental stress tolerance, such as freezing, chilling, heat, drought, water saturation, salt, photoconditions, radiation and ozone. The transcription factors are used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The transgenic plants are useful for growing a progeny plant comprising the desired trait. The polynucleotides and polypeptides are also useful in bioinformatic search methods. This sequence represents one

                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                      invention can be used to produced a plant having altered traits such as:
cenhanced tolerance to abiotic stress; glyphosphate tolerance; hormone
sensitivity; disease resistance; sugar sensing; early or late flowering;
altered flower structure, change in stem bifurcations, altered branching
trichomes; reduced apical dominance, reduced trichome density; lack of
trichomes; reduced ectopic trichome number; altered trichome
development; increase in trichome number; altered seed development;
altered cell proliferation or cell differentiation; rapid development;
premature senescence; increased neorosis; increase in seedling or plant
size; decreased plant size; leaf morphology; seed morphology; seed
biochemistry; increase in root anthocyanins; increase in plant
transgenic plant, polynucleotides and polypeptides are useful in
bioinformatic search methods. This is the amino acid sequence of a plant
transcription factor that can be used in the creation of a transgenic
                                                                                                                                                                                                                    Query Match
